

Bringing value to the Education Sector

Amillan's communications solutions for the education sector improve the teaching environment and the learning experience. Creating many opportunities for all stakeholders in education, our solutions drive efficiency, productivity and accountability. We build environments where staff and students can extend their capabilities and embrace new working practices and exciting learning opportunities.

Student services

Simplify communications with students right from the beginning. Monitor and manage the registration process to minimise missed calls and missed opportunities. Provide a reliable communications infrastructure and give students wider access to information and resources. Build a secure learning environment for everyone.

Mobility

Introduce true mobility for staff and students and provide flexible learning and teaching environments. Open opportunities for distance learning and blend all media to create an intuitive environment where voice, video and data all form part of the learning environment.

Data protection

Protect intellectual property, student records and staff data on fixed and mobile devices. Track devices and destroy data should a mobile device be stolen or lost.

Collaboration

Enable joined-up learning across campus's, cities and continents. Create a truly international learning environment for students and open new research opportunities for staff.

Organisation efficiency

Increase the output of the organisation without increasing the resource. Simplify communications, eliminate bottlenecks and improve the flow of information. Use resources intelligently to deal with peaks in demand. Create an agile environment to respond quickly to changing needs.

Return on investment

Make every penny count. Converge networks to improve the flow of information. Reduce the total cost of ownership and measure improvements in performance and output.

Our Approach

Our approach in working with you is to firstly understand your organisation, the challenges it faces and it's strategic objectives. From this we create a blueprint for optimum communications among staff, students and all stakeholders. Our dedicated education team apply their experience to give you best practice processes to optimise cost and performance efficiencies.

Everything we do in your organisation has the same goal – to add value.

Best practice

Our industry experience and technology excellence delivers best practice solutions supporting streamlined processes.

Intelligence

Our dedicated education team map your challenges and objectives to technology solutions to improve performance, agility and accountability.

Innovation

We continuously innovate and regenerate our skills to allow your organisation to innovate in optimising the service it provides to the community.

Investment

We design solutions to protect your current investment and to maximise your return in the short, medium and long term.

Complete solutions

From cabling to converged networks and integrated contact centres, we can deliver and support all areas.

Our Solutions

Combining our voice, data and application skills we can provide a fully integrated converged environment to the education sector. We can fulfil the communications requirements for schools, colleges and universities, providing leading edge technology for departments, remote sites, home and mobile workers. Working with best of breed technology manufacturers, we combine best practice, technology excellence and education sector understanding to give you the best communications infrastructure.

Managed Services

We provide a range of managed services for voice, data and video infrastructure. Different levels of managed service provide choices for organisations, depending on the level of skills in-house and the organisation structure.

Convergence

Integrating the voice and data networks we deliver an IP Telephony solution to provide simplified management, greater resilience and scalability. We place the most practical solution on each site to provide the functionality required. This often means our solutions combine Voice over IP, IP Telephony and traditional telephony.

Infrastructure

Providing the cabling and network infrastructure for all premises across the organisation. We have the advantage of designing the infrastructure with the understanding of the way in which it will be used in a live environment.

Contact Centre

Integrating the contact centre with desktop applications and providing staff with more intelligent information leads to an increase in performance. As email and SMS are becoming more common means of communicating, we can blend all media into the same environment to ensure timely and effective responses. We can also push information out to staff and students to remind them of important information.

Applications

Adding applications to meet legal and management requirements is simplified in the converged environment.
