

Services for M+E Contractors

Amillan helps M+E Contractors to deliver the cabling, voice and data infrastructure to clients. We are a trusted technology partner to many household names across the UK and over 25 years, we have gained specialist knowledge in a number of vertical markets - education, health, local government, finance, retail and multi-site businesses. We bring together best practice, intelligence and technology to provide solutions that make a real difference.

Profitable business

Amillan is a privately owned, financially secure business that has been operating for 25 years. Over this time we have sustained profitable growth and the business has grown organically. We attribute this to the level of service and value that we provide to our clients as many of the clients we had 25 years ago are still with us. We are also proud to be working with companies like Dixons, Swintons, Halfords, Birmingham City Council and City College.

Complete solution

We can provide cabling, voice and data infrastructure solutions which means that every part of the communications infrastructure is covered by the Amillan project plan. This makes it easier for the M+E Contractor to work with Amillan as we can address all ICT infrastructure requirements right from the start of the project.

Track record

We have a proven track record of delivering complex projects on time and within budget. The long-term relationships that we enjoy with our clients is testimony to the fact that we continuously provide high levels of customer service. We estimate that the solutions we provide process over 1 million calls a day.

Health and safety

Having worked on many projects of varying sizes with M+E Contractors, all our staff are fully aware of and adhere to the health and safety procedures onsite. As we can provide the cabling, voice and data infrastructure, we can work alongside the other contractors onsite at all the different stages of the project, mapping our project plans to theirs to ensure that the project is delivered on time.

Our accreditations

We aim to keep our skills and knowledge at the highest standard and the following are some of the accreditations that we currently hold:

- QMS ISO9002 Registered Firm
- QMS ISO14001 Registered Firm
- BICSI Corporate Member
- BICSI RCDD Registered Staff
- NICEIC Registered Firm
- Brand Rex Authorised Installer
- Excel Cabling Partner
- Alcatel Premium Partner
- HP Procurve Preferred Partner 2009

Our clients

The following are some of the clients that we currently work with:

- Dixons, PC World and Currys
- Birmingham City Council
- Halfords
- Swintons
- NEC Group
- Wimbledon
- Walsall College
- BEN PCT
- Shepway Council

We are proud that our clients stay with us for many years and much of our business is generated through recommendations. We believe this is recognition of the good service that we provide to all our clients.

Our solutions

Combining our voice, data and application skills, we can provide a fully integrated converged environment. We can fulfil the communications requirements of every part of the business.

Structured cabling

We can provide the cabling infrastructure for voice, data and video. As we also provide voice and data networks, this provides us with the added advantage of understanding and appreciating how the cabling infrastructure will be used in a live environment.

Voice

We provide telephone systems as part of a converged solution or as a stand-alone telephony platform. We place the most practical solution on site to provide the functionality required and this often means that our solutions combine Voice over IP, IP Telephony and traditional telephony.

Data

We can provide data networks for LAN/ WAN and wireless connectivity. We can create an integrated environment that connects security systems and digital signage solutions to the network to push information around the business and to simplify the management of the network.

Applications

We can provide a broad range of applications to enhance communications in the business. Contact centres, unified communications, collaboration tools and many other telephony driven applications can all be provided.

Managed Services

Amillan ManageCom is the managed service for voice and data and this can be provided in a number of different ways, depending on the level of skill and resource in the business.
